

HAZRAT ALI AKONDA

Frontend Developer | JavaScript | React | Next.js | UI/UX Design | Performance Optimization
+8801315055532 | hazrataliakonda@gmail.com | [LinkedIn](#) | [Github](#) | Dhaka - Bangladesh

Frontend Engineer with 3+ years of experience building scalable web applications using React and Next.js. Strong focus on UI/UX, performance, and scalable design systems. Experienced in turning ideas into polished, user-friendly interfaces with attention to detail, interaction, and usability.

SKILLS

Language: JavaScript (ES6+), TypeScript, HTML5 (Semantic)
Libraries & Frameworks: React, Next.js, Redux, Progressive Web App
Styling & Design: Tailwind CSS, Bootstrap, ShadCn, MUI, Responsive web design
Backend & Data: RESTful API, GraphQL, Strapi, Dato CMS, Supabase, Search Spring
Performance & SEO: SSG, SSR, SEO Optimization, Core Web Vitals, Performance Profiling
Tools: Git, GitHub, Jira, Cursor, Figma

EXPERIENCE

Frontend Developer
Cronix LLC | Remote | 02/02/2024 - present

- Reduced development time by 50% by leveraging AI-assisted workflows with Cursor
- Developed high-performance web applications using Next.js, reducing page load time by 35% and improving user retention
- Applied semantic HTML5 with accessible UI following accessibility and SEO standards
- Built scalable frontend architectures with reusable components and decreased 30% repeated code
- Integrated RESTful APIs, implementing robust error handling and asynchronous data flows
- Optimize page load performance by 25–40% using lazy loading and code splitting

Frontend Developer
Technopers | Remote | 20/08/2022 - 20/02/2024

- Reduced code duplication by 30% through reusable component architecture
- Improved performance and UX, contributing to faster load times and better Core Web Vitals
- Collaborated with designers and product teams to refine user flows and improve usability
- Ensured cross-browser compatibility and consistent UI behavior across devices

PROJECTS

Map-Based House Rental Platform

- Developed a map-based house rental platform using Next.js, Tailwind CSS, and Supabase with Google Maps API for real-time property visualization
- Created a dashboard for property owners to manage listings, which made it easier to control data.
- Implemented Static Site Generation (SSG), significantly improving page load speed and user experience.

Wanderlust

- Implemented an AI-powered travel planner that generates smart itineraries and enables interactive destination exploration
- Generated a day-wise itinerary with flexible plan regeneration for easy comparison
- Added image-based destination discovery to enhance the travel exploration experience
- Cached generated itineraries in DB to reduce 30% repeated AI requests
